

WHITEPAPER v1

**DEV DOING
SOMETHING**

DEV DOING SOMETHING (DDS)

is an Ethereum-Based Investor Safety and Optimization platform of which the native token \$DEV acts as the key to a wide variety of assorted tools and services made available to token holders. Through implementing pivotal ease of life features with a vision for cross chain adoption, DDS will change the way users trade and navigate the world of microcap tokens on EVM compatible chains.

THE PROBLEM:

As the world of microcap tokens evolves with the hope of bringing new entrants and capital into the general market, many investors are left without the tools or knowledge to safely navigate what has become a harshly competitive space. Whether it be dodging rugpulls or honeypots, or trading against more experienced traders and snipers, the barrier to entry to successfully trading in the microcap space can often work against the general goal of bringing fresh capital into the market.

THE PROBLEM

By shutting down new entrants with scams and other deterring experiences before they have a chance to understand the ebb and flow of microcaps, we are closing the door on the growth that is needed to sustain the very thing we want to preserve.

THE PROBLEM

Similarly, longer term residents of the microcap space sometimes do not know where to find the guarded tools of the pros that can put them on par to compete, and even the best fall victim to scams and rugpulls from time to time. Following tokens from launch to launch , tracking entries, monitoring developer activity, staying a step ahead or on track with snipers and botthers; this all becomes very time consuming!

DEV DOING SOMETHING

THE SOLUTION:

The DDS ecosystem will offer a full range of dedicated tools, information, and services that will benefit everyone, from long term veterans to first day participants.

With a team of developers and contributors who have spent years navigating the space to find not only what works but also what is missing, DDS will offer the ultimate solutions to navigating the day-to-day of the microcap space and the knowledge to come out on top.

UTILITY PHASE 1

DEV DOING SOMETHING

INTRODUCTION TO THE DDS TELEGRAM BOT SUITE.

Much of the interaction with and acquisition of information in the world of microcap tokens occurs in 2 places: Telegram and Twitter.

Dev Doing Something has designed and begun production on a series of Telegram Trading and Safety bots to enable Telegram users to almost single-handedly monitor and transact exclusively through the use of custom Telegram Bots. After analyzing the general experience of actively trading and tracking a large variety of tokens, DDS has put together features that most users will find to increase significantly the efficiency of the way they manage their portfolio and potential investments.

DDS MONITOR BOT:

The first bot in the suite, DDS Monitor Bot is a monitoring and tracking bot capable of tracking the moves of developer wallets by reading transactions as they are sent to the mempool for processing by miners. DDS Monitor bot will be available as a single user or group bot.

The full release of DDS Monitor Bot will have custom features to allow the addition of developer wallets by simply interacting with the bot UI and posting the smart contract for analysis. Future updates to the Monitor bot will feature a Pro version with wallet integrations which allow \$DEV holders access to custom features of the .Monitor bot such as “Quick Sell”, a feature which allows the front running of suspicious actions such as rug pulling or honeypotting.

The free version of DDS Monitor bot will remain available to the public with basic but useful features with the potential for ad placement.

DEV DOING SOMETHING

DDS LIMIT BOT:

The DDS limit bot will be a premium feature for \$DEV holders which will replace the Uniswap /Metamask interactions when trading Uniswap and other future DEX pairs. DDS Limit bot will support multi-wallet functions with enhanced features such as Limit Orders (Price and Amount Buy or Sell Triggers), Gas Priority, Custom Mutli-Wallet amounts, Custom Slippage, and other useful features.

The DDS Limit bot will ultimately allow users to both automate their trading (never miss another entry or exit) as well as speed up the process of getting the contract and executing market buy orders with custom slippage. Trade Uniswap and other DEX pairs without having to leave Telegram!

Future updates to the bot will see an enhanced UI experience, smoother operation, automated GWEI suggestions, and much more.

DEV DOING SOMETHING

DDS METHOD BOT:

The DDS Method Bot is a Method ID sniper bot with an array of functions which will allow \$DEV holders to be in the first block of applicable orders on any token launch. DDS Method Bot will detect functions the token deployer is calling as they enable trading/add liquidity and allow users to buy free of blacklisting or front runs (zero tax tokens).

The DDS method bot will also safeguard by front-running such activities as removing of liquidity (Rug Pulls), setting fees to 99% (honeypot), and other suspicious actions.

DEV DOING SOMETHING

DDS COPY BOT:

The DDS Copy Bot is a Copy Trading bot which will be populated with a list of suggested wallets in addition to the ability to add new target wallets for Copy Trading and follow elite snipers and traders to the inside scoop on new tokens.

The DDS Telegram Bot Suite is Phase One of the total utility of DDS with Phase 2 to be explained and implemented following the release of the V2 of the DDS Whitepaper.

SOME OF THE KEY FEATURES TO BE EXPLAINED AND IMPLEMENTED IN PHASE 2 OF THE DDS UTILITY SUITE ARE:

DDS INVESTIGATION TOOLS -

A COLLECTION OF INVESTIGATORY TOOLS FOR RUGS, SCAMS, AND COMMON BAD PRACTICE IN CURRENT SMART CONTRACTS AND DEPLOYER FUNDING.

DDS SMART CONTRACT LIBRARY -

A CATALOG OF EASY TO USE, SAFE ERC-20 SMART CONTRACTS WITH POPULAR FEATURES FOR EASY USE BY UPCOMING TOKEN PROJECTS.

DDS WIKI-

A WEALTH OF SHARED KNOWLEDGE OF TERMINOLOGY, CONCEPTS, AND METHODOLOGIES COMMONLY USED ACROSS THE DEFI SECTOR.
