Loopring Foundation

Lifter of Worlds

Born: 197? Grad: Arizona State Year: 2006

Daniel Wang is the Founder behind the Loopring (LRC) Layer 2 Decentralized Exchange (DEX) protocol for the Ethereum Virtual Machine (EVM). This protocol is powered and scaled by zero-knowledge proof technology; this allows the trading of digital assets on Layer 2 between users with fees that are fractions of what they used to be. Oh, and exponentially faster without Banks...

"Good hunters need patience." -Daniel Wang and every other hunting Dad
