

DXdao

HR/People Mover

[DXdao](#) is a decentralized collective that builds and governs DeFi protocols. It was spawned in the spring of 2019; over 450 addresses have Reputation (REP), which is non-transferrable and governs DXdao. In May of 2020, DXdao launched a bonding curve fundraiser and issued the DXD token, which has a claim on profits from DXdao's products. DXdao's product suite includes Omen, a leading prediction markets platform, Swapr, a governance-enabled and multi-chain AMM with adjustable fees, and Mesa, a decentralized IDO platform.

DXdao is entirely on-chain. Everything from hiring decisions to product updates happen through its governance system, based on holographic consensus.

HR/People Mover

DXdao is a decentralized collective, native to the internet, but it still needs processes and norms on how we work (well) together. This role will need to think about the traditional things that HR focuses on, hiring/retaining top talent + creating a fair and fun work environment, but will need to build new frameworks and standards for a new type of organization.

An HR/People Mover will:

- Own the worker onboarding process and help workers navigate on-chain proposals
- Build tools and processes to allow for cross-collaboration and management without a bureaucratic hierarchy
- Have an eye for talent and know how to attract and retain the best
- Develop people operations that drive a continuous feedback culture
- Help make DXdao a global, decentralized collective, where anyone in the world can contribute to

DXdao is looking for:

- A DAO/DeFi enthusiast who believes in the power of decentralization
- Someone who has empowered remote teams in previous roles
- Thinks constantly about how work can be redefined in the digital/crypto age
- An independent, forward-thinking person - everything is on-chain

If interested, [send an email intro to Chris Powers](#).
