

DXdao

Senior Web 3 Front-End

[DXdao](#) is a decentralized collective that builds and governs DeFi protocols. It was spawned in the spring of 2019; over 450 addresses have Reputation (REP), which is non-transferrable and governs DXdao. In May of 2020, DXdao launched a bonding curve fundraiser and issued the DXD token, which has a claim on profits from DXdao's products. DXdao's product suite includes Omen, a leading prediction markets platform, Swapr, a governance-enabled and multi-chain AMM with adjustable fees, and Mesa, a decentralized IDO platform.

DXdao is entirely on-chain. Everything from hiring decisions to product updates happen through its governance system, based on holographic consensus.

Senior Web 3 Front-End

DXdao is a decentralized collective native to the internet that is building a suite of Web3 products. As such, it heavily relies on the technical expertise of Web3 developers with solid knowledge of building dApps on top of Ethereum.

What you should be interested in doing:

- Interested in DeFi
- Interested in solving complex problems (a background in finance/STEM helps here)
- A constant mindset for refactoring software

DXdao is looking for:

- A DAO/DeFi enthusiast who believes in the power of decentralization
- Solid experience in React and its ecosystem
- Solid understanding of dApps Architecture
- Comfortable with Solidity language
- Write maintainable, high quality code
- Knowledge of Docker, Jest, and IPFS
- Able to work in Agile environment (Scrum)
- Implements SOLID principles of SWE
- Self-starter and entrepreneurship spirit are a huge plus!
