

Add your Ethereum and LED token addresses and access your balances on the Blockchain ledger and share your QR Code

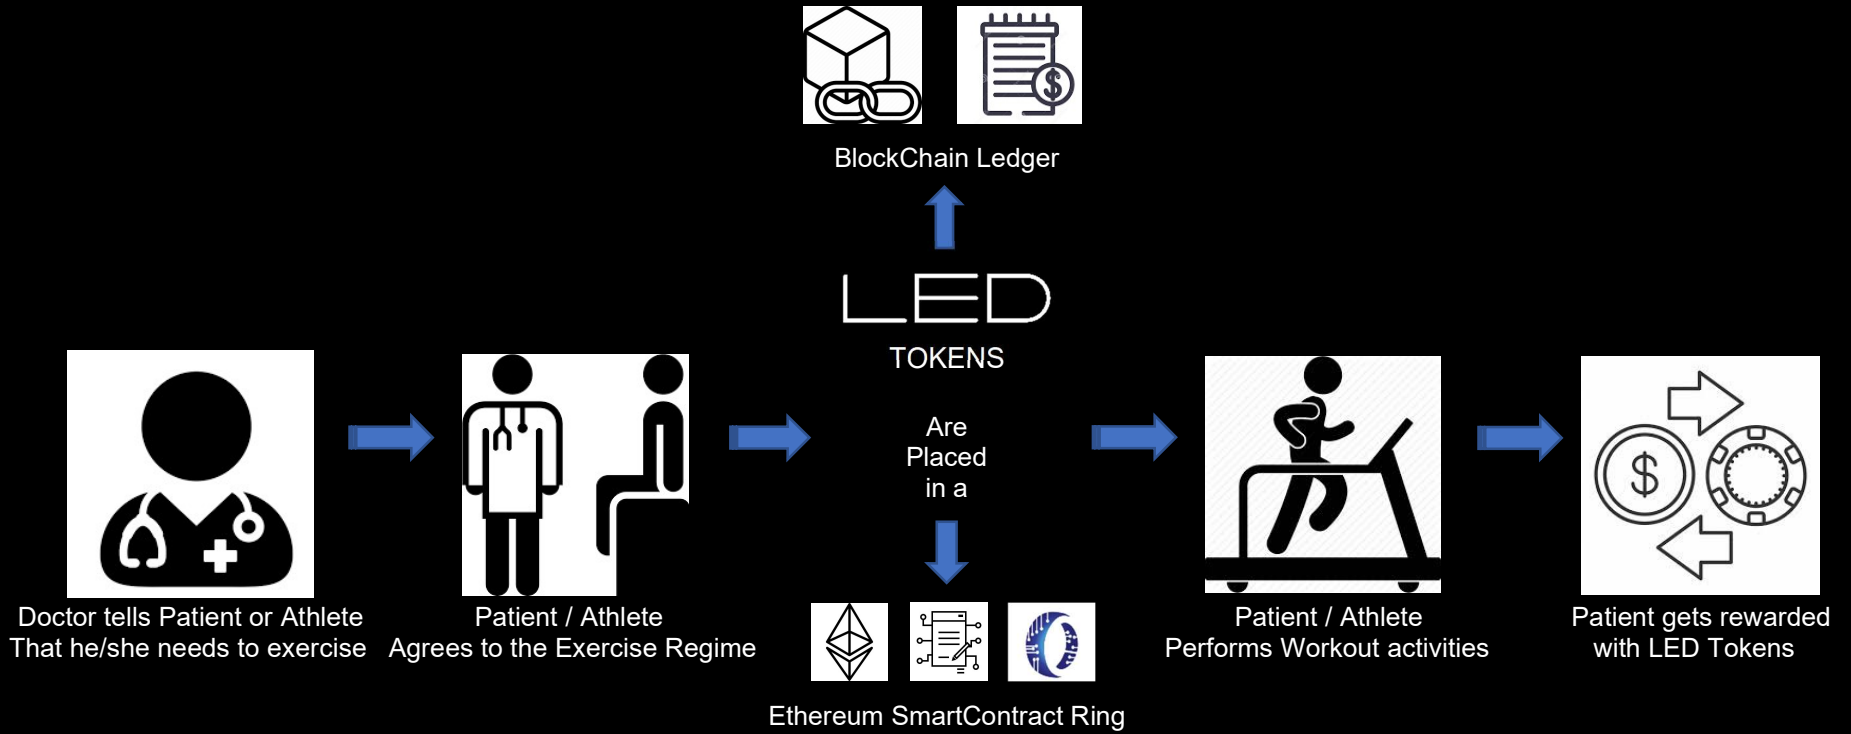

Other cases for Blockchain Healthcare wearable devices is rewarding the patients. Many health insurance companies want patients to have a healthy lifestyle so that they are less susceptible to diseases.

To promote a healthy lifestyle, the patients are rewarded for performing workout activities that would keep them healthy and sleep well.

A Blockchain smart contract can be utilized to award a patient by collecting data from their IoT-enabled smart wearable device.

A major concern includes storing blockchain addresses, recording, accessing and sharing electronic health records (EHR). A patient's treatment history is very confidential and crucial for a hospital, doctors and patients sharing the same data with other partners has been a challenge.
