

DXdao

Senior Solidity Engineer

[DXdao](#) is a decentralized collective that builds and governs DeFi protocols. It was spawned in the spring of 2019; over 450 addresses have Reputation (REP), which is non-transferrable and governs DXdao. In May of 2020, DXdao launched a bonding curve fundraiser and issued the DXD token, which has a claim on profits from DXdao's products. DXdao's product suite includes Omen, a leading prediction markets platform, Swapr, a governance-enabled and multi-chain AMM with adjustable fees, and Mesa, a decentralized IDO platform.

DXdao is entirely on-chain. Everything from hiring decisions to product updates happen through its governance system, based on holographic consensus.

Senior Solidity Engineer

DXdao is a decentralized collective native to the internet that is building a suite of Web3 products. As such, it heavily relies on the technical expertise of solidity developers with strong knowledge of building on top of Ethereum.

What you should be interested in doing:

- Building the next generation of DeFi products
- Working on the cutting edge of decentralization
- Working for a distributed, consensus based, onchain organization

DXdao is looking for:

- Independent self-starter who is comfortable working in a fast moving environment
- Experience in solidity and in deploying smart contracts on Ethereum or other EVM compatible blockchain; preferably in DeFi or decentralized governance
- Strong focus on security and testing
- Team player who communicates well
