

Should veDAO Enforce Accountability Among Community Leads?

SIP-3

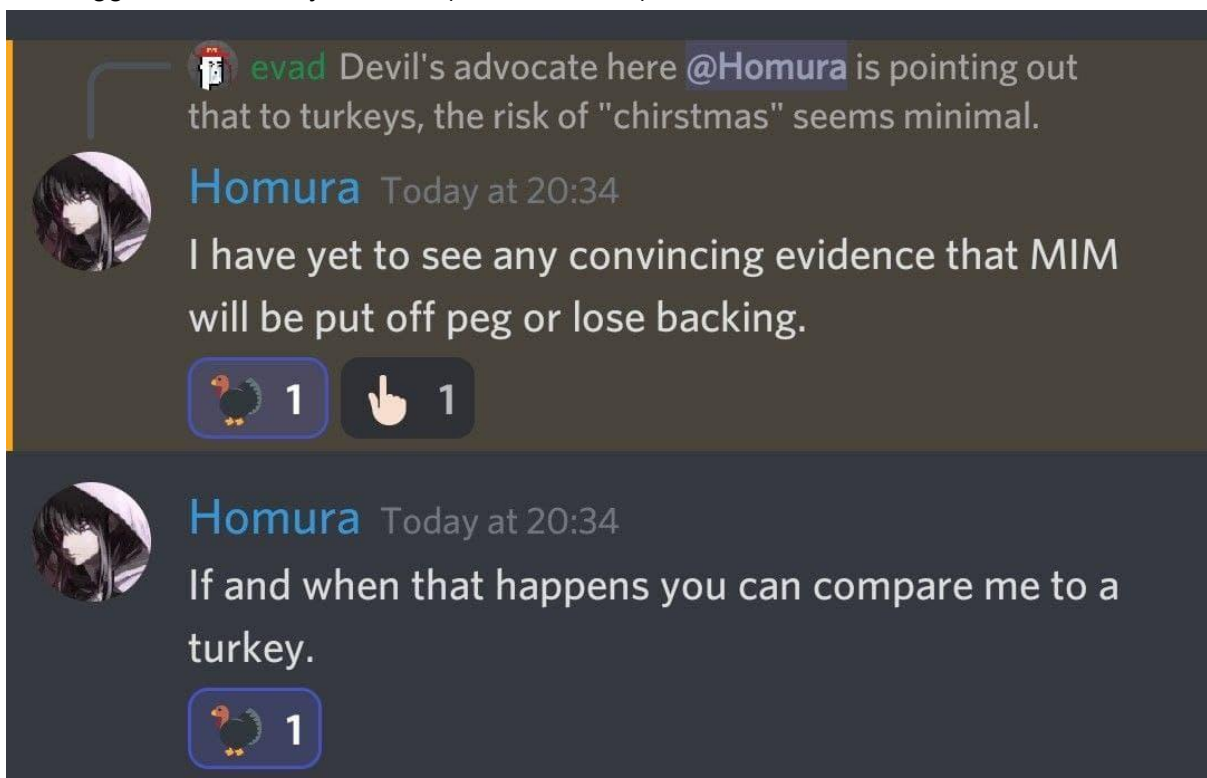

Author:the eth address behind this proposal

Enforcing Accountability Among Community Leads

Preceding the de-peg of MIM, community members in the veDAO discord were warned of the possibility by a number of community members, and discussions were taking place to mitigate this risk by providing an alternative stablecoin liquidity pool. A separate proposal has been created regarding this matter.

This proposal is intended to enforce a promise made by one of the moderators for veDAO, Homura (Homura#9788). No other suggestions are made about appropriate actions to be taken regarding Homura's continued moderation in this proposal, but the result of this proposal is encouraged to be used by future proposals regarding this.

The suggestion made by Homura (Homura#9788) was as follows:

The evidence that MIM lost peg is as follows:

 **Homura** No it's not. It's already back to 99c.

 **bigjohn44** Today at 22:32

Swap 

78898.1  MIM ▾
\$71,402.6

↓

50000  USDC ▾
\$50,000 (-30%)

1 USDC = 1.578 MIM (\$1)  \$487.24 ▾

Conclusion

Following on from the assertion by Homura (Homura#9788) that if MIM lost its peg that they could be compared to a turkey, I present evidence that it indeed did lose its peg. The logical conclusion is that we can refer to Homura (Homura#9788) as a turkey, and emote accordingly. This proposal seeks to formalise that, and that alone. The implications of this upon the acceptance of current moderation policies and team decisions are deliberately not discussed in this proposal.
