FINDEXY

TOKENOMICS v1.1

Fixed-Supply Utility Token Framework

WE FIND TRANSPARENT DATA CHAINS FOR YOU

Publication Candidate - September 2026

Document Status

Publication candidate for the FINDEXY public technical repository. Contract facts are separated from allocation policy. The allocation model below is approved as the v1.1 target structure; allocation wallet addresses and implementation status must be published separately as they become available.

Item	Value
Project	FINDEXY
Version	Tokenomics v1.1
Network	BNB Smart Chain
Contract	0xE5c9e94b697cae5827a388B44Dd404dA689f5D85
Website	https://findexy.com
Status	Publication Candidate

1. Token Identity

Parameter	Value
Name	FINDEXY
Symbol	FINDEXY
Total Supply	21,000,000,000 FINDEXY
Maximum Supply under supplied contract	21,000,000,000 FINDEXY
Decimals	18
Initial issuance	Entire supply minted once at deployment
Initial recipient	Deployer address
Additional minting	Not available

2. Contract-Level Monetary Rules

FINDEXY uses a fixed-supply OpenZeppelin ERC20 architecture. The constructor mints 21,000,000,000 FINDEXY once to the deployment address.

- No owner or administrator.
- No privileged roles.
- No blacklist or pause.
- No transfer tax or fee.
- No max transaction or wallet limit.
- No proxy or upgradeability.
- No public token burn function.
- No external calls in the FINDEXY contract.

3. Allocation Model

Allocation	%	FINDEXY	Purpose
Ecosystem & Technology	40%	8,400,000,000	Product development, data infrastructure, integrations, research and ecosystem expansion.
Strategic Reserve	25%	5,250,000,000	Long-term reserve and

			strategic project requirements.
Liquidity	15%	3,150,000,000	Liquidity allocation; not necessarily deployed into the market at once.
Community & Adoption	10%	2,100,000,000	Community growth, education, onboarding and documented adoption programs.
Team	10%	2,100,000,000	Long-term team allocation subject to the published lock/vesting policy.
TOTAL	100%	21,000,000,000	

4. Allocation vs. Circulating Supply

Allocation does not equal circulation. A token assigned to a treasury, reserve, locked team position or undeployed liquidity allocation should not automatically be described as circulating.

Metric	Definition
Total Supply	21,000,000,000 FINDEXY created by the contract.
Allocated Supply	Tokens assigned to a defined economic category.
Locked Supply	Tokens subject to an enforceable or publicly verifiable lock/vesting arrangement.
Treasury / Reserve Supply	Tokens held for strategic or project purposes and not necessarily circulating.
Liquidity Allocation	Maximum allocation designated for liquidity purposes.
Initial Liquidity Deployment	Actual amount placed into the initial official liquidity position(s).
Circulating Supply	Tokens actually available to the market under the methodology published by FINDEXY and relevant trackers.

5. Proof of Allocation

FINDEXY intends to publish a public Proof of Allocation record after allocation wallets are created. Until then, wallet fields remain intentionally unfilled rather than inferred.

Category	Allocation	Wallet	Implementation
Ecosystem & Technology	8,400,000,000	To be published	Pending
Strategic Reserve	5,250,000,000	To be published	Pending
Liquidity	3,150,000,000	To be published	Pending
Community & Adoption	2,100,000,000	To be published	Pending
Team	2,100,000,000	To be published	Pending

6. Team Lock and Vesting

Target policy: a 12-month lock from the official FINDEXY launch date, followed by 24 months of linear vesting. The base FINDEXY token contract does not enforce this policy; if adopted on-chain,

the implementation should use a separate transparent mechanism and be published before being represented as active.

Item	Policy
Team allocation	10% / 2,100,000,000 FINDEXY
Initial lock	12 months from official launch date
Vesting after lock	24 months linear
Base token admin rights	None
Vesting implementation	Separate transparent mechanism; address to be published

7. Strategic Reserve

The Strategic Reserve represents 25% of total supply. It is intended for long-term project needs and should be held in publicly identified wallet(s). Material transfers should be documented by purpose. Reserve holdings should not be presented as circulating solely because they exist on-chain.

8. Liquidity Policy

The 15% Liquidity allocation is a ceiling for liquidity purposes, not a statement that 3.15 billion FINDEXY will be placed into a DEX at launch. Initial Liquidity Deployment will be published separately with the official DEX, pair, pool address, deployed token amount and ownership/lock information for the liquidity position.

- One official initial market should be clearly identified before additional pairs are presented as official.
- Initial price is not a guaranteed future price.
- Liquidity allocation and actual deployed liquidity must be reported separately.
- Official pool addresses should be published through FINDEXY-controlled channels.

9. Ecosystem & Technology

The 40% Ecosystem & Technology allocation combines product and research functions to avoid overlapping categories. It is intended to support FINDEXY Trace, Attribution, Risk, Verify, indexing, evidence infrastructure, APIs, integrations and future ecosystem development.

10. Community & Adoption

The 10% Community & Adoption allocation may support education, onboarding, ecosystem participation and documented incentive programs. Any airdrop or reward program should publish eligibility and distribution rules and should not be described as a guaranteed-return mechanism.

11. Token Utility

FINDEXY is intended as a utility token for FINDEXY products and services as they become operational. Potential utility includes advanced analytics, API/data access, attribution requests, verification services and enterprise or ecosystem functionality where technically and legally appropriate.

Token ownership does not itself create a right to fixed interest, guaranteed yield, guaranteed appreciation or predetermined investment return.

12. Shariah-Oriented Principles

- Fixed and publicly disclosed supply.
- No interest-bearing entitlement embedded in token ownership.
- No guaranteed yield or predetermined financial return.
- Transparent allocation and wallet identification.
- Utility tied to documented services rather than an undisclosed economic mechanism.
- Independent review of materially new smart products or financial services where appropriate.

FINDEXY requires its own independent Shariah assessment before any claim of Shariah compliance. The IslamicCoin / Haqq Chain opinion supplied to the project is a process reference only.

13. Publication Checklist

- Publish verified smart-contract source.
- Publish allocation wallet addresses.
- Confirm official FINDEXY launch date.
- Implement and publish team vesting if adopted.
- Publish independent smart-contract audit.
- Publish official liquidity pool address and initial deployment data after creation.
- Publish immutable Whitepaper and Tokenomics references after final approval.
- Submit the final package for independent Shariah review if Shariah positioning is pursued.

14. Disclaimer

This document describes FINDEXY contract facts and the approved v1.1 target allocation model. Allocation wallets, vesting implementation, initial liquidity deployment and circulating supply must be verified separately as they are implemented. Nothing in this document constitutes investment, legal, tax, regulatory or Shariah advice or a guarantee of liquidity, price or return.
