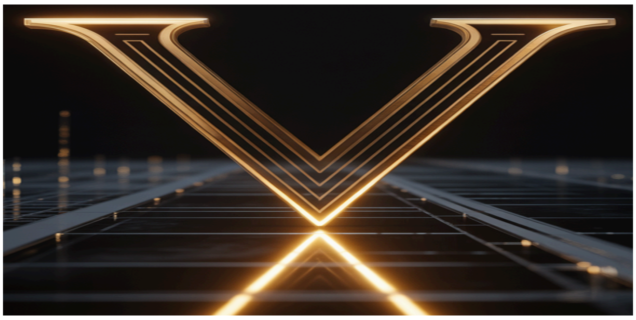
VELARION



Whitepaper v1.0 — 2026

PROBLEM

Let me be honest about something.

The lottery industry makes over $300 billion a year. And yet the people actually playing — the ones putting in their dollar, their hope, their time — are the ones who benefit the least.

Traditional lotteries are black boxes. You hand over your money and hope for the best. Nobody can verify the draw. Nobody can challenge the result. You just trust that the organization running it is being honest. Most of the time, you have no real reason to.

Then came crypto. And for a moment, it felt like things might change.

Smart contracts. Transparency. Decentralization. The technology was genuinely revolutionary.

But the people behind the projects were not.

I watched project after project launch with beautiful websites, ambitious whitepapers and promises that never materialized. Roadmaps pushed back every quarter. Communities strung along for months. Founders cashing out quietly while their Discord kept posting "exciting updates coming soon."

Players lost their money. Investors lost their trust. And the technology — which could have changed everything — got buried under a mountain of scams and disappointment.

I refused to accept that this was the end of the story.

SOLUTION

The fix is simple. Remove the human from the equation wherever possible.

Not because humans are bad — but because trust should not be required when code can handle it better.

Every draw on Velarion is executed by a smart contract. The result is generated by a verifiable random function that nobody — not me, not a developer, not a validator — can influence. The payout happens automatically. The winner receives their prize directly in their wallet. No waiting. No paperwork. No middleman taking a cut they were not entitled to.

The contract is public. Anyone can read it. Anyone can verify it. Anyone can check that it does exactly what it says it does.

But I also knew that technology alone was not enough.

People need to see real winners. Real reactions. Real lives changed. Not stock photos and testimonials on a landing page — actual human beings opening a car door for the first time and realising their life just shifted.

That is what Velarion is built around. The system handles the mechanics. The moments handle the marketing.

PRODUCT

The $1 Draw

One dollar. One ticket. One shot at something real.

I wanted to build something that anyone in the world could access — regardless of where they live, what currency they use or how much money they have. A dollar is a dollar everywhere. And on Velarion, it carries the same weight whether you are playing from Paris, Lagos or Manila.

Each pool fills with 100,000 players. Once full, the smart contract draws automatically. The winner receives 85% of the pool — $85,000 — instantly, directly to their wallet. Velarion takes 15% to fund operations, development and future growth.

New pools open the moment old ones close. The system never sleeps.

Players can also choose their region when entering a draw. If enough people from the same area join — a local pool forms. One community. One winner. Maximum impact.

The Car Event

This one is different.

I wanted to create something that people would talk about even if they did not win. Something that felt less like a lottery and more like an experience — the kind that gets filmed, shared and remembered.

50,000 players. $150 a ticket. 20 winners selected on-chain.

Twenty luxury vehicles gathered in a single secret location. The winners are told where to go — and then it begins. A live treasure hunt. First to find their car gets to choose. Cameras follow every move. The audience watches in real time and places bets on who gets there first, which model gets picked, what is hidden inside each vehicle.

Because there is something inside every car. A surprise. Nobody knows what it is until the door opens.

Every ticket buyer also receives an exclusive Velarion collector's item — shipped physically to their address. Win or lose, you walk away with something.

$900,000 from every event is locked in a community-controlled smart contract and redistributed to humanitarian causes — decided by 13 elected validators, requiring every single signature before a single dollar moves.

VIP PASS

1,000 passes. Numbered #1 to #1000. Not one more.

I wanted early believers to be genuinely rewarded — not with empty promises or discount codes, but with a real, permanent structural advantage built directly into the blockchain.

Every VIP Pass is an ERC-721 NFT deployed on Base. The moment you hold one, the lottery contract recognises your wallet and activates your advantages automatically. You do not need to claim anything. You do not need to click anything. It just works.

What you get for life :

One free ticket with a x10 multiplier on every $1 Draw — automatically entered before the public even sees the pool open.

One free ticket with a x10 multiplier every day on all multi-winner draws.

Priority slots secured before general access opens.

1% of every jackpot generated on the platform — shared equally among all 1,000 VIP holders, sent directly to your wallet.

8% of every Car Event pool — shared equally, automatically, the moment the event closes.

One vote on every major decision — developer selection, influencer partnerships, country expansion, marketing budget.

And every month, you choose where your free ticket goes — the $1 Draw or The Car Event. Your call. Changeable on the first of every month.

The pass is fully tradable. Sell it, trade it — the advantages transfer automatically to whoever holds it. Velarion takes 6% on every resale, permanently.

Price : 450 USDC. Fixed. The number goes up as the passes sell out — not because we change the price, but because the ones left become rarer.

Passive income projection :

On a normal day with three active draws, each VIP earns around $3 automatically. On a high-volume day, that number climbs to $10 or more. At full platform scale — potentially $1,825 per year, passively, just for holding.

The lower your number, the higher your priority. #1 will always have the strongest edge.

THE CAR EVENT — COMMUNITY POOL

Every time The Car Event runs, $900,000 is locked permanently in a multisig smart contract.

Nobody touches it alone. Not me. Not a developer. Not a validator acting solo.

13 validators are elected by VIP holders specifically for this purpose. That is their only role. They have zero access to any other Velarion funds, zero influence over any other decision. Their mandate is narrow, defined and verifiable on the blockchain.

Before any money moves, three things must happen. A mandatory recorded call takes place. The community votes. And all 13 validators sign simultaneously. One missing signature and nothing moves.

The causes are defined in advance and cannot be changed by anyone :

Food aid. Access to clean water. Education. Medical assistance.

No political causes. No intervention in regions where outside funding would create more problems than it solves.

Every decision, every vote, every transaction is published publicly. Nothing is hidden. Nothing can be.

TECHNOLOGY

Velarion runs on Base — Ethereum's Layer 2.

I chose Base because it is fast, cheap and widely accessible. Gas fees are near zero. Transactions confirm in seconds. And it connects directly to the largest crypto ecosystem in the world.

Three smart contracts power the platform :

The lottery contract manages every pool — opening, filling, drawing and paying out automatically.

The VIP NFT contract is an ERC-721 that tracks pass ownership and activates advantages in real time.

The Community Pool contract is a multisig that locks humanitarian funds and requires all 13 validator signatures before releasing anything.

All three are independent, interconnected and publicly readable on Basescan.

Draws use a verifiable random function — tamper-proof, on-chain, auditable by anyone.

An independent security audit will be completed before the public launch. The full report will be published permanently on IPFS.

The platform runs across multiple domains simultaneously. If one is blocked in a given country — mirrors take over automatically. The smart contract itself runs on the blockchain regardless of what happens to any website. No government, no company, no individual can shut it down.

Founder fees are received by a non-custodial hardware wallet. No third party has access. Ever.

TOKENOMICS

Per $1 Draw : *→ 100,000 players × $1 = $100,000 total pool → Velarion fee : $15,000 → Prize pool distributed to winners : $85,000*

Per Car Event : *→ 40,000 paying players × $150 = $6,000,000 → 20 luxury vehicles : $3,000,000 → Community Pool locked : $900,000 → VIP passive rewards : $100,000 → Production, organisation, filming : $2,000,000*

VIP Pass sale (max 1,000 × 450 USDC) : *→ Maximum raised : $450,000 → Smart contract development & audit → Website & technical infrastructure → Legal & compliance → Marketing & first events → Founding team compensation — transparent, reasonable, after delivery*

Secondary market royalties : *→ 6% on every VIP Pass resale → Automatic, permanent, to Velarion*

ROADMAP

I am not going to give you ten promises and a pretty timeline graphic.

Here is what is happening and when.

Phase 1 — Q2 2026 *The foundation goes in. 1,000 VIP Passes launch. The smart contract gets audited. The website and this whitepaper go live. The community starts forming around people who were early enough to see what this is before everyone else does.*

Phase 2 — Q3 2026 *The lottery contract deploys. First test draws run in closed beta — VIP holders get access first. The project lists on a launchpad. First partnership announcements.*

Phase 3 — Q4 2026 *The first public $1 Draw runs with 100,000 players. The first Car Event follows. Winners are filmed. Videos go out. The VIP secondary market opens. The world starts paying attention.*

Phase 4 — 2027 *Daily draws. Mobile app. Institutional conversations. The target is one million active players. Not as a vanity metric — as proof that the system works at scale.*

GOVERNANCE

VIP holders have real power here. Not symbolic power — actual decision-making authority over how the project grows.

Every major move goes to a vote before it happens. Which developer gets hired. Which influencer gets approached. Which country gets prioritised for expansion. How the marketing budget gets allocated each phase.

One pass. One vote. Results published on-chain.

The 13 Car Event validators are a separate layer of governance — elected specifically to manage the Community Pool and nothing else. They are compensated automatically for their time and participation. Their authority ends precisely where the pool ends.

LEGAL

Velarion is a decentralised protocol operating on a public blockchain.

Participating in any draw means accepting the platform terms. Players are responsible for understanding and complying with their local regulations. Velarion does not collect personal data beyond wallet addresses.

This document is for informational purposes only. It is not financial advice. It is not an invitation to invest. The project will evolve — all updates will be published transparently and in full.

TEAM

There is one person behind this.

I am not going to put a LinkedIn profile here or a photo with a suit and a conference lanyard. That is not how I operate and honestly, after everything I have seen in this space, I think you should be more suspicious of founders who lead with their face than ones who lead with their work.

I am quasi-anonymous. Not because I have something to hide — but because a visible founder is a vulnerable project. The blockchain is transparent. I am not the guarantee. The code is.

I have the capacity to manage, coordinate and build. I have surrounded myself — and will continue to surround myself — with the right people, chosen and validated by the community at every step.

I do not ship until it is ready. I do not promise what I cannot deliver. I do not disappear when things get hard.

That is all I can tell you right now. The rest, I will show you.

— The Founder, Velarion
